树生秋海棠 新种 (秋海棠组) 图 1

Begonia arborea Y. M. Shui, sp. nov. [Sect. *Diplocidium* (Wight) A. DC.] Fig. 1

Habitu *B. garretii* Craib. similis sed planta acaulis folio 1 basali, capsulis obovoideis alis obovatis differt.

Herba perennis, decidua, basi tuberifera, tuberibus subglobosis, 1 cm diam. Stipulae caducae. Folium 1 basale; lamina glabra et chartacea, late cordata, 14—15 cm longa, 14—17 cm lata, 3—5-fida, basi oblique cordata, lobis longo-acuminatis, margine irregulariter serratis, nervis palmatis, basilanibus 3—5; petioli 12—14 cm longi, glabri. Cymae terminales, 3—4-florae, pedunculo 10—12 cm longo; bractae ovatae, 0.6 cm longae, 0.2 cm latae, caducae. Flores ignoti; pedicelli 3.0—3.3 cm longi, penduli. Ovarium anguste obovoideum, triloculare; styli 3, distincti, 1.5 mm longi; stigmatibus lunatis papillosis; laminae placentarum ovariorum superiores mediaeque bifidae, inferiores simplices. Capsulae obovoideae, 2.0—2.4 cm longae, 1.2—1.4 cm latae, subaequaliter trialatae; alae horizontales et obovatae, apice obtusae, reticulatae, 1.8—2.0 cm longae, 0.5—0.6 cm latae.

Yunnan (云南): Luchun county (绿春县), Mt. Huanglianshan (黄连山), Hydrologic Station (水文站), 1700—1900 m, on trees of the evergreen broad-leaved forest, 18 Oct 1995, S. G. Wu (武素功), Y. M. Shui (税玉民), Y. P. Yang (杨永平), L. H. Liu (刘伦辉), J. H. He (何疆海), J. Murata, H. Nagamatsu, T. Sugawara, X. Chen (成晓), N. Murakami 144 (Holotype: KUN 0773200).

本种极近泰国产的 *Begonia garretii* Craib., 两者均有球茎和深裂的叶片, 但前者无直立茎, 花序基生, 叶裂片不再羽裂, 花序少花, 果实倒卵状, 而后者有明显直立茎, 茎生 1~2 叶片, 花序茎生且多花, 果实长椭圆状而不同。

* 基金项目: 云南省自然科学基金资助 (2001C22Q)
